Good morning Carol, et al.

We are circling back to this issue post legislative session and post other urgent matters as well. What we will do is attempt to locate the chemical plants and beneficiation mills within the aerial extent of the mines in the CERCLIS list. This will likely take some time since it involves us getting old documents, aerials (if they exist) and coordinating this with our Mining Bureau and also with FDOH. Also, post-mining sampling data for radio nuclides in formerly mined lands is abundant and I don't know if it ever was placed in a GIS map or a database that can be used by us and EPA. But we will find out.

One thing is certain, this process will take some time since it involves internal and external coordination. We are in communication with FDOH and will keep you informed of developments as they occur. We also look forward to the draft MOU. We would appreciate any insight on that issue. Thank you again,
Jorge R. Caspary

Subject: Maps with CERCLIS sites

Hi Jorge - in follow up to our January 26th meeting in Tallahassee, I wanted to provide you with the maps you requested. Both files show the location of the CERCLIS sites. However, you may want to have the shape files provided so that you can do more with the data. If you do, just let me know who you'd like us to work with. There was someone working with Bud Cates in Bureau of Mines as I recall, but I don't remember the name. Anyway, that type of data would certainly provide you with more detail - just let me know and we'll make it happen!

Carol
